

Safety in System
Protection for man and machine

AZM201 THE VERSATILE SOLENOID INTERLOCK

- High holding force
 $F_{zh} = 2,000 \text{ N}$, $F_{max} = 2,600 \text{ N}$
- Latching force approx. 30 N
- Individually coded version with coding level "High" according to ISO 14119
- Suitable for applications up to Cat. 4 / PL e / SIL 3
- Compatible with 40 mm profiles
- For hinged and sliding guards
- Series-wiring without reduction of the safety level

AZM201

THE VERSATILE SOLENOID INTERLOCK

Door handle actuator

The door handle actuator enables intuitive operation

Actuator with rotating knob

Actuator with emergency exit

Door handles inside and outside of the hazardous area

The AZM201 solenoid interlock is versatile in use and configuration.

It has been optimised for attachment to 40 mm profiles and can be complemented by a wide range of actuators.

The range includes compact actuators for sliding doors and actuators for rotating doors with handles, with or without three-point locking.

The actuators can be optionally assembled with emergency exit or lockout tag.

ORDERING CODE

THE AZM201 PRODUCT FAMILY ACTUATOR

ACTUATOR B30

The B30 door handle actuator is available with a traditional door handle or rotary button for easy and intuitive operation. It also means that an otherwise additional door handle can be dispensed with.

Another advantage is that when opening, the actuator tongue moves into the actuator housing, minimising the risk of injury on the protruding actuator. All actuators are available for both left and right hinged doors.

There is also an actuator type with additional locking rods for larger doors and double doors.

The rod retracts or extends when the door handle is actuated and engages at the top and bottom of the safety guard frame. This ensures reliable three-point locking.

With locking rod

With door handle

With rotating knob

ACCESSIBLE HAZARDOUS AREAS

The hazardous areas of machinery and systems can be so large that people are able to access them in full.

The Machinery Directive stipulates that in such cases, it must be impossible for people to become trapped in the hazardous area.

To prevent this from happening, the interlocks can be equipped with an emergency exit function. These allow people to exit the hazardous area without the need to use tools.

LOCKOUT TAG AND EMERGENCY EXIT

The door handle actuator can be configured with a lockout tag and/or emergency exit in the hazardous area.

With lockout tag

Emergency exit with door handle made from plastic

Emergency exit with door handle made from metal

Emergency exit with inset handle

THE AZM201 PRODUCT FAMILY ACTUATOR

ACTUATOR B1

Compact actuators are available for sliding doors. All actuators are available for both left and right hinged doors.

The P0 variant allows a sliding door to be opened in an emergency by pulling on a release cord attached to the eyelet on the actuator tongue.

Actuator B1

Actuator B1 with emergency exit

ORDERING CODE

AZ/AZM201-B1-LTPO

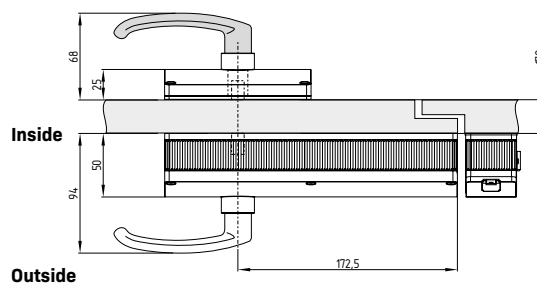

ACTUATOR B40

Its special shape means that the B40 actuator can be mounted to hinged doors with overlapping folds.

The safety guard can be opened and closed from outside by turning the door-handle.

THE AZM201 PRODUCT FAMILY

PROTECTING HUMANS AND MACHINES

PROTECTING HUMANS AND MACHINES

Different versions of the AZM201 solenoid interlock are available according to requirements, as well as a simple AZ201 safety switch without interlock function.

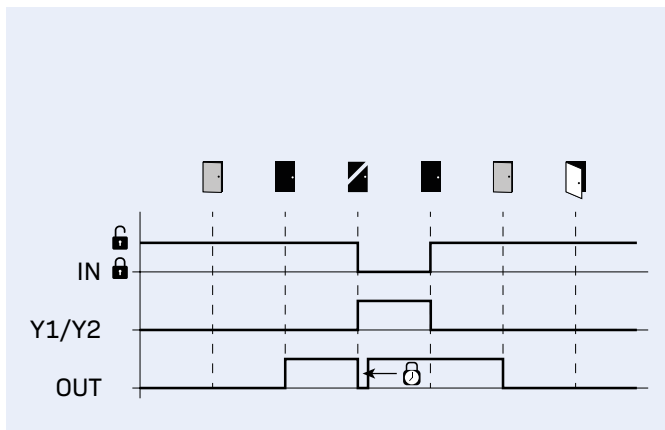

The safety switch that you choose will depend on the results of the risk assessment.

AZM201Z SOLENOID INTERLOCK MONITORING

The safety outputs of the AZM201Z solenoid interlock are enabled only when the safety guard is closed and the interlock is locked. This variant is primarily for personal safety.

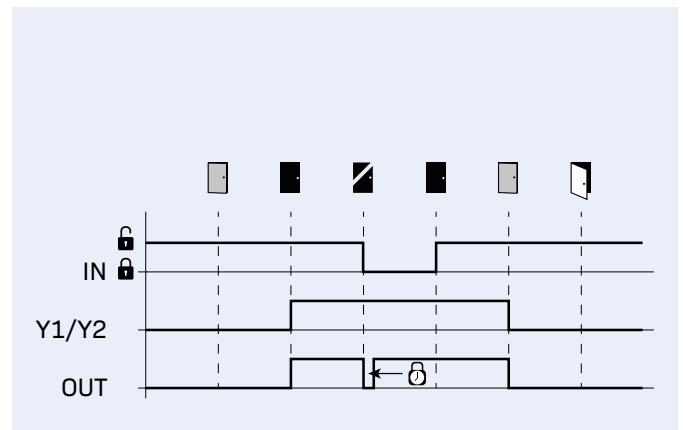

AZM201B ACTUATOR MONITORING

The AZM201B version (actuator monitoring) can be used for applications where process protection is required. The safety outputs of this variant are already enabled when the safety guard is closed. With this device, the solenoid interlock must not be imperatively locked.

Key

- IN Solenoid control (closed current version)

AZ201 WITHOUT LOCKING FUNCTION

With the AZ201 safety switch, only the position of the safety guard is monitored. There is no integrated guard locking function.

Key

- Y1/Y2 Safety guard monitoring
- OUT Diagnostic output

THE AZM201 PRODUCT FAMILY

AZM201 WITH CONVENTIONAL DIAGNOSTICS

AZM201 WITH CONVENTIONAL DIAGNOSTICS

The microprocessor technology in the solenoid interlock enables comprehensive diagnostics of the respective operating status. The AZM201 solenoid interlock with conventional diagnostics function has a short-circuit proof diagnostic output that can be used for central visualisation or control functions, e.g. in a PLC.

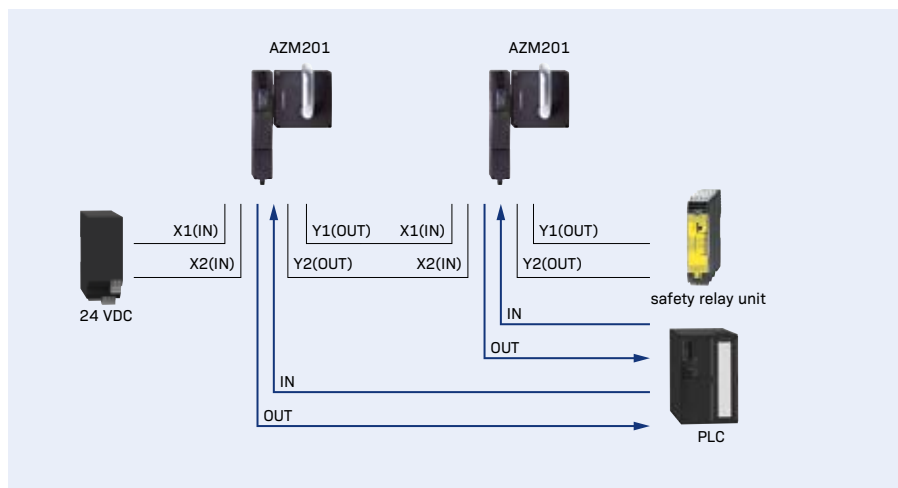

The current system status can be derived from a combination of signals from the solenoid interlock control, the safety outputs and the diagnostic output.

ERROR

Errors, which no longer guarantee the function of the safety switchgear (internal errors) cause the safety outputs to be disabled. Any error that does not immediately affect the safe functionality of a solenoid interlock will lead to a delayed shutdown. The error is indicated by flashing codes from the red LED on the device.

ERROR WARNING

In the event of an error warning, the safety outputs remain enabled until delayed shutdown. The diagnostic output is disabled. This signal combination can be used to stop the machine in a controlled manner. In this way, the process can be shut down in a controlled manner. This prevents the breakage of tools and workpieces and increases the availability of the machine.

Key

- IN Solenoid control
- Y1/Y2 Interlock monitoring 
- OUT Conventional diagnostic output

THE AZM201 PRODUCT FAMILY

AZM201 WITH SERIAL DIAGNOSTICS

AZM201 WITH SERIAL DIAGNOSTICS

Electronic safety sensors and interlocks with SD interface are capable of transmitting comprehensive status and diagnostics data to a superior machine control system. The data from series-connected safety switchgear are sent to a SD gateway via the SD bus and transmitted to industrial field bus protocols.

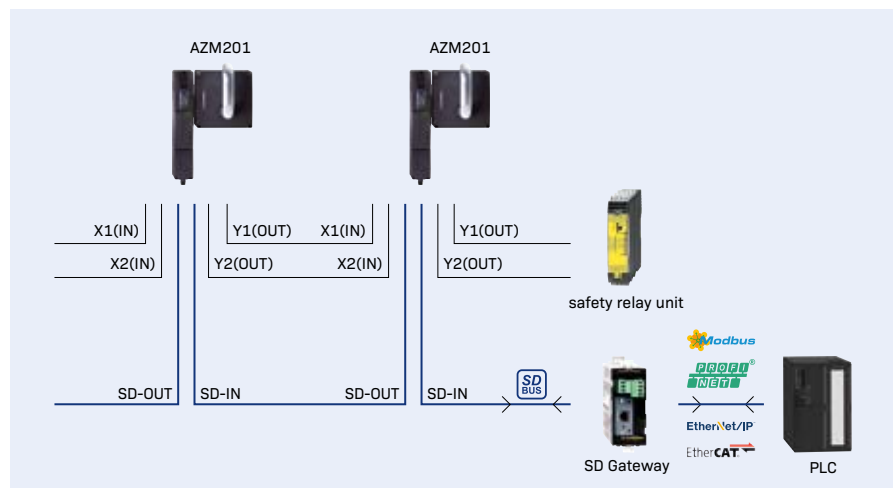

The SD interface also allows safety interlocks to be locked and unlocked individually, as well as configured. Consequently, on the AZM201, for example, information can be output as to whether a door was ajar, the actuator retracted and ultimately locked. Up to 31 devices can be connected to one SD bus in series.

SD GATEWAYS AND SAFETY CONTROLLERS

The diagnostic signal can be fed to the superior control via different SD gateways.

INSTALLATION AIDS

Various installation aids are available for easy and fail-safe installation.

Key

- Y1/Y2 Interlock monitoring
- SD-IN/OUT Solenoid control and serial diagnostic input/output

THE SCHMERSAL GROUP

PROTECTION FOR MAN AND MACHINE

In the demanding field of machine safety, the owner-managed Schmersal Group is one of the international market leaders. The company, which was founded in 1945, has a workforce of about 2000 people and seven manufacturing sites on three continents along with its own companies and sales partners in more than 60 countries.

Customers of the Schmersal Group include global players from the area of mechanical engineering and plant manufacturing as well as operators of machinery. They profit from the company's extensive expertise as a provider of systems and solutions for machine safety. Furthermore, Schmersal specialises in various areas including food & beverage, packaging, machine tools, lift switchgear, heavy industry and automotive.

A major contribution to the systems and solutions offered by the Schmersal Group is made by tec.nicum with its comprehensive range of services: certified Functional Safety Engineers advise machinery manufacturers and machinery operators in all aspects relating to machinery and occupational safety – and do so with product and manufacturer neutrality. Furthermore, they design and realise complex solutions for safety around the world in close collaboration with the clients.

SAFETY PRODUCTS

- Safety switches and sensors, solenoid interlocks
- Safety controllers and safety relay modules, safety bus systems
- Optoelectronic and tactile safety devices
- Automation technology: position switches, proximity switches

SAFETY SYSTEMS

- Complete solutions for safeguarding hazard areas
- Individual parametrisation and programming of safety controllers
- Tailor-made safety technology – be it for individual machines or a complex production line
- Industry-specific safety solutions

SAFETY SERVICES

- tec.nicum academy – Seminars and training
- tec.nicum consulting – Consultancy services
- tec.nicum engineering – Design and technical planning
- tec.nicum integration – Execution and installation
