Overview

The AZM300 is a combination of Solenoid latching keyed interlock and RFID Safety Sensor.

One look at the AZM300 and one cannot help but notice the distinctive external cam. This unique design allows the AZM300 to accept the actuator from three sides, providing mounting flexibility for either left- or right-hinged doors, or sliding guards. The solenoid locking force of 1,000 N keeps the guard door securely locked until dangerous conditions, which may exist even after removal of power, have abated.

The AZM300 also has integrated a radio frequency identification (RFID) sensor to detect the actuator and indicate a closed guard. This non-contact operating principle limits wear on components, tolerates misalignments, and offers the option of individual coding: The basic version of the sensor responds to any AZM300 target actuator; The "I1" version only accepts the coded ID number of the specific target actuator which is taught in during the first start-up; The "I2" version allows the teach-in process to be repeated, allowing replacement of a lost or damaged actuator.

The AZM300 features all of the diagnostic advantages of our electronic sensors. With continuous internal function tests and monitoring of the safety outputs, the AZM300 can be wired in series without detriment to the safety levels. Diagnostic LED’s on the sensor indicate various errors, misalignment and door open/closed signaling. For more advanced safety outputs, the AZM300 can be wired in series without detriment to the sensors. With continuous internal function tests and monitoring of the

Emergency Release

Power to unlock models are available with an optional Emergency release. The red release handle can be attached to either side of the unit and provides a manual by-pass of the solenoid lock regardless of the power status.

- N type Emergency Release version is for mounting outside the hazardous area.
- T type Emergency Exit meets the requirements of the ANSI/RIA R15.06 standard for emergency exit from inside the guarded hazardous area.

Applications

- Food processing machinery
- Pharmaceutical machinery
- Medical applications
- Outdoor equipment
- Material handling systems
- Packaging machinery
- Chemical processing equipment
- Robot cells
- Folding or brake presses
- Filter presses
- Punching machines
- Printing machines
- Injection molding
- Palletizers
- Packaging equipment
