**SMS Safety Pressure Mats**

**Overview**

Safety pressure mats are used to safeguard personnel around machinery with hazardous movement, such as wood processing machines, scissor lifts or punch presses. They provide a slip free surface that is highly resistant to chemicals such as acids, caustic solutions, oil, and gasoline.

The safety pressure mat consists of two current-carrying thin steel plates separated by insulating strips. Applying pressure to the mat surface creates an electrical cross-wire short between the steel plates. The connected safety controller evaluates this signal and stops the hazardous movement.

Schmersal offers two safety pressure mat series:

**SMS4**

The SMS 4 series is connected to the floor by means of an aluminum profile and special corner sections. As a result of the beveled form of the profile, tripping hazards are avoided. The aluminum profile additionally serves as edge protection, when fork-lift trucks or other floor conveyors drive over the safety mats. The aluminum trim extends each edge by 62mm beyond the active area of the mat.

**SMS5**

The SMS 5 series features a ramp profile directly molded to the active surface of the safety mat. The ramp profile helps avoid tripping hazards and eliminates the need for the aluminum trim. Each edge of the mat is extended by 35mm beyond the active area.

Both series of mats are available in 6 standard sizes, but can be customized to individual application requirements - color, dimensions, special shapes, or tread patterns. They meet the requirements of PLd, Safety Category 3 to ISO 13849 when used with a Schmersal SRB 301HC Safety Controller.

**Safety Distance**

The proper arrangement of the safety mat with regard to the adjacent hazardous area mainly depends on the after travel time of the machine and the approaching speed of the operator. The standard ISO 13855 (Safety of Machinery, Approaching Speed of Body Members) provides a formula to calculate the safety distance:

\[ S = 1600 \text{ mm/s} \times (T_1 + T_2) + 1200 \text{ mm} \]

**Applications**

- Power-driven machines
- Power presses for the metal and plastics industry
- Folding or brake presses
- Filter presses
- Punching machines
- Robot cells
- Printing machines
- Injection molding
- Materials handling and storage technology
- Palletizers
- Packaging equipment

**Available Literature**

- SMS/5 Brochure, 8 pages
