Installation

Machine safety upgrades

Execution and assembly

Installation of protective equipment and safety fences

tec.nicum has extensive experience in the planning and implementation of complex protective equipment for various industries. These include the food and packaging industry, the automotive industry, paper manufacturing, metal processing and chemicals and pharmaceuticals. Our technical safety solutions are tailored to the individual requirements of the respective industry and the client's application. This involves the planning and installation of fixed or moving protective equipment.

tec.nicum global presence allows us to have local integration partners that can help design, fabricate, and install a safety solution for your machine. There are times, that due to ability, time or comfort, companies require an outside resource to help them meet the proper machine guarding requirements. tec.nicum can be your one source for machine safety integration.

Project management

If you already have a partnership with an existing integrator, allow tec.nicum to manage the safety modifications by coordinating with your integrator to ensure safety designs and installations meet the proper safety requirements and expectations from the risk analysis.
